The "Gold Box" Distortion

This classic handwired tank of a box delivers a wide range of sonic distortion from a subtle, warm, tube-driven tone to balls-to-the-walls searing hot overdrive, with that vintage sustain and classic tone you grew up with.

The "Orange Box" Phaser

The swirling, edgy phaser that started it all in 1973! This handwired classic features select resistors paired with hand-matched components to achieve the same smooth and warm modulation as the original . . . the result? Gobs of thick, rich tone. This little box can be heard on more hit albums than any other FX box in history - hands down!

The "Red Box" Compressor

The Red Box is a true classic and since its introduction in 1976 has been heard on countless landmark recordings. It's known best for its crisp, percussive attack as well as its lush, rich sustain while maintaining the natural, clear tone of your guitar.
